Hiring Manager
Google

Subject: Application for Software Engineering Apprentice

Dear Hiring Manager,

I am excited to apply for the Software Engineering Apprentice role at Google. As a curious learner and problem-solver, I see this opportunity not just as a step in my career but as a chance to grow in an environment where innovation and collaboration thrive.

From my early experiences writing simple scripts to my current journey in deepening my understanding of data structures, algorithms, and system design, I have always been fascinated by how software can solve real-world problems at scale. I am currently pursuing my degree in Electronics and Telecommunication Engineering, where I have explored topics like cloud computing and deep learning. Alongside academics, I have built projects ranging from small applications to networking systems, each teaching me the importance of writing efficient, maintainable code.

But beyond the technical skills, what excites me most about Google is the culture—where people are encouraged to ask big questions, experiment, and support each other's growth. I resonate deeply with that. Coming from a background where persistence, teamwork, and leadership were essential—whether in coding projects or representing my college in university-level cricket matches—I've learned how to balance resilience with humility.

I am eager to contribute my skills in coding, analytical thinking, and problem-solving to meaningful projects at Google while learning from some of the best minds in the industry. I believe my blend of technical curiosity, persistence, and a genuine desire to grow makes me a strong fit for this apprenticeship.

Thank you for considering my application. I would love the opportunity to bring my passion, energy, and eagerness to learn to your team at Google.

Warm regards,
Prathamesh Madane
